Summary

Backend / Fullstack Developer with experience building scalable web applications using Node.js, TypeScript, ExpressJS, ReactJS, and .NET technologies. Experienced in developing RESTful APIs, authentication systems, database design, and microservices architecture with MySQL, PostgreSQL, and MongoDB. Passionate about writing maintainable code, optimizing system performance, and continuously improving software engineering skills.

Education

Saigon University

Software Engineer in Information Technology.

August 2021 – Present

Ho Chi Minh City

Technical Skills

- Javascript, Typescript, Java, C/C++, C#, SQL, HTML/CSS, Express.js, React.js, SpringMVC, .NET.
- PostgreSQL, MySQL, MongoDB, Github, Gitlab, Docker, OOP, Microservices.

Experience

Hiptech Solution

.NET Developer - Full time

Thu Duc - Ho Chi Minh

March 2025 - March 2026

- WinForm ADC Calibration Keyboard: Implemented user interface components using .NET (WinForms/WPF).
- Music Desktop App Velasora: Developed a desktop music player application for Corsair, focusing on UI design and API integration. Implemented user interface components using .NET (WinForms/WPF). Integrated APIs to fetch and display data from backend services.

Projects

Store Management Website – Fullstack | ASP.NET Core 9 (Web API), ReactJs, TypeScript, PostgreSQL

Start: October, 2025 | End: December, 2025

Role: Backend Developer

🔗 Store Management

- Developed a full-stack Retail Store Management System using ASP.NET Core 9 (Web API) and ReactJs with TypeScript. Implemented RESTful APIs with Entity Framework Core (PostgreSQL), JWT authentication, BCrypt password hashing, AutoMapper, FluentValidation, and Swagger/OpenAPI documentation. Built a modern frontend with Vite, Ant Design, TailwindCSS, and TanStack Router/React Query for state management and server synchronization, integrated Axios for API communication and Zod for schema validation.

E-commerce (Microservices Architecture) - Fullstack | TypeScript, ExpressJS, PostgreSQL, Docker

Start: March, 2025 | End: May, 2026

Role: Fullstack Developer

🔗 E-commerce

- Developed a full-stack e-commerce application using a Microservices Architecture with TypeScript, ExpressJS, ReactJS, and Docker. Designed and implemented scalable backend services with MySQL and Sequelize, including authentication, user, product, category, brand, and order management. Built responsive frontend interfaces with React, React Query, Zustand, and TailwindCSS, featuring authentication flows, cart management, product browsing, and admin dashboards.

Task Management Website – Fullstack | Node.js, Express.js, Material UI, MongoDB, ReactJs, JWT

Start: July, 2023 | End: September, 2024

Role: Fullstack Developer

🔗 Task Management

- Developed a full-stack Task Management Web Application inspired by Trello using Node.js, Express.js, and MongoDB for the backend and React with Vite for the frontend. Designed and implemented RESTful APIs with JWT authentication, role-based authorization, and robust input validation. Built drag-and-drop board, column, and card management features with real-time UI updates, state management, and optimized API integration using Axios. Applied clean architecture principles, modular folder structure, and environment-based configuration for scalable and maintainable development.
